

JONATHAN SAMUEL DÍAZ TORRES

Computer Systems Engineering Student o Backend Developer

CAREER SUMMARY

Computer Systems Engineering student with a passion for data analysis and full-stack development. I specialize in building scalable RESTful APIs and microservices using Java and Spring Boot, alongside managing robust MySQL databases. Additionally, I have experience creating high-performance dynamic interfaces with React and JavaScript. I am driven by the challenge of transforming complex data into efficient, secure, and user-centered software solutions.

EDUCATION

Computer Systems Engineering
Escuela Superior de Cómputo - IPN
2022-present

SOFT SKILLS

- Disciplined
- English B2
- Responsible
- Highly self-motivated
- Analytical
- Problem-solving
- Communicative
- Time management
- Proactive

TECHNICAL SKILLS

- Backend: Spring Boot, RESTful APIs, Microservices.
- Languages: Java, JavaScript.
- Frontend: React, Tailwind CSS.
- Networking (OSPF, EIGRP), Linux (Kali), GNS3.

PROJECTS

Hospital Management System

2025

- Developed a comprehensive full-stack application to streamline hospital operations, including patient registration, bed assignment, and medical inventory management.
- Implemented a reporting module to generate detailed clinical histories for patients and professional profiles for doctors, including their academic background and certifications.
- Architected and managed a relational database using MySQL, engineered a dynamic and interactive UI using React and GSAP, Designed a custom API with JavaScript to perform CRUD operations and generate detailed clinical reports and medical staff profiles.

"4 Hermanos" Casino Platform

2024

- Engineered a gaming platform featuring multiple interactive modules and a secure user registration system.
- Optimized backend logic to manage real-time game states and user balance updates, focusing on system reliability.

Football Chronicles Web Portal

2022-present

- Designed and developed a sports journalism platform featuring world-class football match reports and historical chronicles.
- Created a high-performance UI using React and Tailwind CSS, mimicking the professional layout of elite digital sports newspapers.
- Implemented structured data management to organize large volumes of multimedia content, ensuring a seamless reading experience.
